

Vascular Lab

Northwest Regional Heart and Vascular – Portland offers a wide range of noninvasive vascular imaging exams accredited by the International Accreditation Commission located within our outpatient vascular non-invasive lab.

We perform a variety of arterial and venous studies to assist in the management of patients who present with symptoms that may be compatible with arterial or venous pathology.

Our services include:

- Aorta iliac duplex
- Abdominal aorta duplex
- Renal duplex
- Mesenteric duplex
- Upper extremity
- Arterial duplex
- Upper extremity venous duplex
- Lower extremity arterial duplex
- Lower extremity venous duplex
- Venous insufficiency duplex
- Rest and stress ankle brachial indices

Each patient will be cared for by a vascular technologist who works closely with our physicians to provide high quality and timely results for our patients. These tests can be ordered within Adventist Health from Epic or outside of Adventist Health by any provider. Results are documented and integrated within the patient's electronic health record and communicated to the patient directly from our outpatient clinic. Many patients enjoy the benefit of coordination of care between appointments for imaging and follow up with their physician.
